

02.03.2020 EC

Present: Tim, Stepan, Rafayel, John, Raphael, Omar, Maurik

- Next Collaboration meeting dates: Week of May 11 or May 18 - Stepan
May 14, 15 and 16
- SVT work, when - May? - Tim
SVT work starts on May 11. SVT will be moved to the cleanroom in EEL and will be stored in a freezer
- [Proposal update for PAC48](#) - Stepan
Will need input on contributors and the overall structure
- Update on 2016 analysis
Vertexing analysis - John: so far things are going very well, expect to finalize selection cuts in a couple of weeks. There new cuts that need to be studied. The biggest issue perhaps is in the simulation-data discrepancy regarding the high z events. More on [the analysis](#) and [presentation](#) at the workshop
Resonance Search - Omar (Rafo): analysis is progressing well, data/MC agreement is within 10%-15% without L1 requirement for positron track. The study of mass distribution is in progress by Kyle and Cameron using 10% unblinded sample. The large run-2-run fluctuations were traced to
- where we are with the calibration of 2019 data and 2019 MC - Marzio/Raphael
Progress is slow due to the limited manpower, MC needs a trigger simulation
