## Useful Reference:

more details see: [https://docs.oracle.com/cd/E19217-01/819-1177-18/cref\\_shm.html](https://docs.oracle.com/cd/E19217-01/819-1177-18/cref_shm.html)

But for different ATCA brand, the clia cmd may be different. Could always "clia help"

## Change RTM Current Threshold:

LinkAgg Board C01-01

1. clia setthreshold 82 0:17 unr 3.088
2. clia setthreshold 82 0:17 uc 2.832
3. clia setthreshold 82 0:17 unc 2.576

LinkAgg Board C01-03

1. clia setthreshold 86 0:17 unr 3.088
2. clia setthreshold 86 0:17 uc 2.832
3. clia setthreshold 86 0:17 unc 2.576

## Reset board

clia boardreset <slot>

The above might not work for the link aggregator board. For that, try:

clia deactivate board <slot>

clia activate board <slot>

## Change Fan setting:

### check fan state:

clia fans  
clia shelf fans\_state

### disable auto fan:

clia setfanpolicy 20 6 disable  
clia setfanpolicy 20 7 disable

clia getfanpolicy 20 6 -s  
clia getfanpolicy 20 7 -s

### set fan min level:

clia minfanlevel 20 6 2

clia minfanlevel 20 7 2

### set fan level:

clia setfanlevel 20 6 2

clia setfanlevel 20 7 2
