

VPN To SLAC

The official instructions are here: [VPN](#)

If you are using the VPN only to access the Stanford journal collection from home, you do not need a VPN. See the instructions below.

LINUX

1) Download the Cisco [AnyConnect](#) client.

2) Install the AnyConnect client via:

```
sudo ./vpn_install.sh
sudo ./dart_install.sh
```

From within the vpn and dart directories respectively.

2) Install clamav (this is the required Linux anti-virus software)

```
sudo apt-get install clamav clamav-daemon
```

3) Start clamav

```
sudo systemctl start clamav-freshclam
```

4) Open AnyConnect client via:

```
/opt/cisco/anyconnect/bin/vpnui
```

Then follow the connection instructions above.

MacOS

1) Follow the link <https://vpn.slac.stanford.edu/>

This will take you through steps to download the Cisco AnyConnect VPN client.

2) Get [CrowdStrike Anti-Virus Software](#) - some anti-virus is required for MAC.

3) Follow the connection instructions here to connect using the Cisco AnyConnect Client: [VPN](#)
