

Request to update DQM alarms limits in L1proc (AlarmsCfg-07-00-27)

Reason for change:

We request to deploy datamonitoring/AlarmsCfg-07-00-27. In this new version we updated the limits on AcdPedPedMeanDeviation_PMTA_TH1 for ACD tile 79.

A more detailed description can be found in the last section of this page.

Test Procedure:

This version of AlarmsCfg has been tested processing locally the monitoring products from 2 LPA runs (648667339, 648734916)

Rollback procedure:

The package can be rolled back to the previous version by flipping a soft link. Also note that the package is completely independent from any other package running in the pipeline and will not cause a version change of L1Proc.

CCB JIRA:

SSC-447 - Jira project doesn't exist or you don't have permission to view it.

Details:

Relaxing warning limit for AcdPedPedMeanDeviation_PMTA_TH1 (ACD tile 79) in AlarmCfg/ xml/acdpeds_eor_alarms.xml:
-Upper warning limit changed from 8 to 10
