

Dark Background deployment Rayonix

Steps to deploy a new dark for the Rayonix

```
1-from mfx-daq, "ssh -X hsuser@con-ics-mfx-rayonix". Password = hsuser
2-killall procServ
3-capture
4-set proper binning (typically 4x4)
5-On the left-most tab, set external trigger to "None" instead of "Frame"
6- hit "Collect New Background"
7- "start single"
8-go to Image tab and verify
9-Exit capture (it may give a segfault, but that's ok).
10-cd to ~/slac/
11-./startDaqInterface_Newcraydl (this will restart the procServ needed to connect to the DAQ).
12-might need a restartdaq
```
