

# Technology

The strong lensing science projects require a range of technologies in order to be realised - this page is a dynamic compendium of these, with the details being built up over time. At the bottom is a notepad where quick ideas can be jotted down; below these ideas are fleshed out in a sequence of linked pages (and sub-pages...)

## Database query wishlist

---

### Notepad:

Point-like image finding

Ring-finding

Arc-finding

Transient finding

Monitoring

Time delay estimation

Microlensing analysis

Lens modeling
