

Detector geometry constants deployment

- Command
- Algorithm
- Repository
- Remarks
 - Default geometry modification
 - Position and orientation
 - Rayonix binning
- Troubleshooting
- References

Multi-panel composite detector needs in geometry constants to get arrays of pixel 3-d coordinates and derived objects. Mapping of correct constants with specific detector is a big issue if it is done manually. This note is about script automating/simplifying this job.

Command

To get current information about geometry constants deployment script and examples, use command:

```
geometry_deploy_constants -h
```

(development on ana-4.0.37) results of the command> **geometry_deploy_constants -h**

```
(ana-4.0.37) [<username>@psanagpul06:~/LCLS/con-py2]$ geometry_deploy_constants -e xpptut15 -r 320 -d XppGon.0:CsPad.0 -D -c ./calib -h
usage:
geometry_deploy_constants -e <experiment> -d <detector> -r <run-number> [-D] [-L <logging-mode>] [...]
```

REGULAR COMMAND EXAMPLE:

```
geometry_deploy_constants -e cxilu9218 -d CxiDs1.0:Jungfrau.0 -r238 --posz -100000 --posx 0 --posy 0 --rotz 90 -D --runrange 10-20
```

TEST COMMANDS:

```
Ex.1 for CsPad CXI      : geometry_deploy_constants -e xpptut15 -r 380 -d CxiDs1.0:CsPad.0 -D -c ./calib
Ex.2 for CsPad CXI      : geometry_deploy_constants -e xpptut15 -r 380 -d CxiDs2.0:CsPad.0 -D -c ./calib
Ex.3 for CsPad XPP       : geometry_deploy_constants -e xpptut15 -r 320 -d XppGon.0:CsPad.0 -D -c ./calib
Ex.4 for cspad2x2        : geometry_deploy_constants -e xpptut15 -r 460 -d MecTargetChamber.0:Cspad2x2.3 -D -c .
/calib --posz -100000 --posx 10 --posy -20 --rotz 90
Ex.5 for jungfrau512k   : geometry_deploy_constants -e xpptut15 -r 410 -d MfxEndstation.0:Jungfrau.1 -D -c .
/calib
Ex.6 for jungfrau1M     : geometry_deploy_constants -e xpptut15 -r 430 -d MfxEndstation.0:Jungfrau.0 -D -c .
/calib
Ex.7 for jungfrau4M     : geometry_deploy_constants -e xpptut15 -r 530 -d DetLab.0:Jungfrau.2 -D -c ./calib
Ex.8 for epix10ka2m     : geometry_deploy_constants -e xpptut15 -r 570 -d MfxEndstation.0:Epix10ka2M.0 -D -c .
/calib
Ex.9 for epix100a       : geometry_deploy_constants -e xpptut15 -r 260 -d XcsEndstation.0:Epix100a.1 -D -c .
/calib
Ex.10 for pnCCD         : geometry_deploy_constants -e xpptut15 -r 450 -d Camp.0:pnCCD.1 -D -c ./calib
Ex.11 for epix10kaquad  : geometry_deploy_constants -e xpptut15 -r 590 -d MecTargetChamber.0:Epix10kaQuad.0 -D -c ./calib
Ex.12 for epix10kaquad  : geometry_deploy_constants -e xpptut15 -r 590 -d MecTargetChamber.0:Epix10kaQuad.1 -D -c ./calib
Ex.13 for epix10kaquad  : geometry_deploy_constants -e xpptut15 -r 590 -d MecTargetChamber.0:Epix10kaQuad.2 -D -c ./calib
Ex.14 for epix10kaquad  : geometry_deploy_constants -e xpptut15 -r 590 -d MecTargetChamber.0:Epix10kaQuad.3 -D -c ./calib
```

Help: `geometry_deploy_constants -h`

Deployment of geometry calibration parameters

optional arguments:

<code>-h, --help</code>	show this help message and exit
<code>-e EXP, --exp EXP</code>	experiment name, default = None
<code>-d DET, --det DET</code>	detector name, default = None
<code>-r RUN, --run RUN</code>	run number of the existing dataset to get run time-stamp, detector full name etc., default = None
<code>-t TSTAMP, --tstamp TSTAMP</code>	

```

non-default time stamp (<YYYYmmddHHMMSS>) or run
number(<10000>) for constants selection in repo. By
default run time is used, default = None

-s DSSUFFIX, --dssuffix DSSUFFIX
    dataset name suffix beyond
    exp=<expname>:run=<runnum><dssuffix>, for example
    ":smd:dir=<path>/xtc/", default = None

-x DSNAME, --dsname DSNAME
    overrides exp=<expname>:run=<runnum><dssuffix> if
    specified, e.g. path to *.xtc file, default = None

-o DIRREPO, --dirrepo DIRREPO
    non-default repository of calibration results, default
    = /reg/g/psdm/detector/calib/geometry/

-c DIRCALIB, --dircalib DIRCALIB
    deployment calib directory if different from standard
    one, default = None

-l LOGLEV, --loglev LOGLEV
    logging mode, one of INFO, CRITICAL, WARN, WARNING,
    ERROR, DEBUG, NOTSET, default = INFO

--dirmode DIRMODE
    mode for all mkdir, default = 511

--filemode FILEMODE
    mode for all saved files, default = 438

-D, --deploy
    deploy constants to the calib dir, default = False

-R RUNRANGE, --runrange RUNRANGE
    validity run range for output calibration file,
    default = 0-end

--parent PARENT
    parent frame name containing the detector geometry
    object, default = IP

--posx POSX
    detector position x[um] relative IP, default =
    0.000000

--posy POSY
    detector position y[um] relative IP, default =
    0.000000

--posz POSZ
    detector position z[um] relative IP, default =
    -100000.000000

--rotx ROTX
    detector rotation angle [degree] around axis x,
    default = 0.000000

--roty ROTY
    detector position angle [degree] around axis y,
    default = 0.000000

--rotz ROTZ
    detector position angle [degree] around axis z,
    default = 0.000000

```

Algorithm

Command `geometry_deploy_constants <parameters>` checks experiment (`-e, --exp`) run (`-r, --run`) information for requested detector (`-d, --det`), finds the run time stamp, finds appropriate file with geometry constants in the repository (`-o, --dirrepo`), changes detector orientation, apply translation relative IP (if parameters `--parent`, `--pos*`, `--rot*` specified) and deploys constants under `<experiment>/calib` directory, or directory specified by parameter (`-c, --calibdir`). Results of this command, depending on parameter (`-l, --loglev`), are dumped on terminal and preserved in the logfile

`<dirrepo>/logs/<year>/<time-stamp>_log_geometry_deploy_constants_<user-login-name>.txt`

Repository

Conventions about repository containing files with geometry calibration constants.

Currently `-o,--dirrepo` is set to `/reg/g/psdm/detector/calib/geometry/`

Current content of --dirrepo

```
(ana-4.0.37) [<username>@psanagpu106:/reg/g/psdm/detector/calib/geometry]$ ls -l
total 4
drwxr-xr-x 1 dubrovin br 0 Mar 22 14:13 andor

geometry-epix10ka2m.0-v1.txt
```

Script finds path to the geometry file using its name conventions:

```
<dirrepo>/<det-type>/<dettype>_<full-lcls1-detector-name>_<time-stamp>.data
```

where the time-stamp is presented in format YYYYMMDD (it is assumed that optical metrology or variation of geometry constants do not need to be changed more often than once per day...).

If geometry file for specified detector and time-stamp is missing, constants from <dettype>_default.data will be loaded.

Remarks

Default geometry modification

Command parameters allow to make a few modifications to the default geometry file before deployment. These modifications include detector position and orientation and Rayonix segment binning.

Position and orientation

Camera position and orientation parameters (--posx/y/z, and --rotx/y/z) are included in the geometry file line beginning with "IP" (which by default set in by parameter --parent IP). It is assumed that all files in repository should have the line beginning with "IP". Otherwise, parameter --parent can be changed.

Rayonix binning

Default geometry file for Rayonix `/reg/g/psdm/detector/calib/geometry/rayonix/rayonix_default.data` has pre-defined segment description like MTRX:V2:3840:3840:44.5:44.5, that can be changed by experiment dependent [binning](#). For detector of type `rayonix` this string parameters are compared with parameters from configuration object for specified experiment (-e EXP, --exp EXP) and run number (-r RUN, --run RUN). Segment binning values from configuration are substituted, e.g. for `xpptut15` run 240 this line is replaced with MTRX:V2:1920:1920:88:88. For backward compatibility of already deployed geometry files similar check and substitution is done on flight at geometry loading in the [Detector.geoaccess](#), [check_rayonix_geo](#) methods (requested by Chuck).

Troubleshooting

From log-file or dump on terminal

example of script output

```

```

it should be quite clear what script is doing and what problem might be. Please pay attention that

- script grabs expected file for requested detector and time-stamp
- check if the geometry file in its final destination under the calib/ directory is available and not empty
- please report about any issues
