## Code Versions

### Engineering Model (sim/recon): ~~(v8r1109p8)~~ v8r1109p10

Based on GR V11 and using Root 5.14.00g. Among many other things it has the new LATC keys that we need to query Moot and new ACD variables in Merit that Alex needs.

Differences with respect to EngineeringModel v7r0913p15

Since we are resynching to a much more recent GR most of the tags have changed. I will not give details here - the curious can find them in the link above.

### System Tests for this [version](#)

#### System tests results:

A lot of differences. Mostly for the MC and due to a new version of Geant (including pruning of secondaries). For data there are a few small differences in aCD related quantities. Not surprising since the ACD code was upgraded.

~~The LAT\_LICOS\_FSW test did not run, but this is now understood. This is an old run which "doesn't contain a "real" secondary boot script file key" so the upstream translation service (CHS/eventFile) failed. This has now been fixed.~~
