

Request to update alarm settings in L1Proc 1.70 (round 3)

Reason for change

The new version (v5r9p0, as opposed to v5r8p8, previously running in L1Proc 1.70) include a very minor change, namely two more exceptions to the calorimeter pedestal alarms.
The detailed description of the changes is in the last section.

Test Procedure

We have processed monitoring products from real on-orbit data (LPA) locally with this version of AlarmsCfg.

Rollback procedure

The package can be rolled back to the previous version by flipping a soft link. Also note that the package is completely independent from any other package running in the pipeline and will not cause a version change of L1Proc.
