

Xrootd News

20070822

- changed the default timeout of the client tools (xrddcmd) from 10s to 5min.
- reconfigured xrootd server. The rm command does not anymore try to remove a file in HPSS. There is an issue now with the rm return code. The server is using the rc from the HPSS removable which is now always 0. Looking into it.

20070820

- Changed olbd config. The olbdlog file is now written into the same directory the xrootd log files are written to.
- All data servers (sulky02/47/48) run now the 20070814-2023 version.

20070817

- Installed new version: 20070814-2023
This version fixed a bug in the cache handling of the server that in previous versions caused "xrddcp -f" to fail and removed the cache file sulky02 restarted with this version.
- Looks like the xrootd-glast.cf in the distribution are is an old version This means no cache on sulky02.
Update: the xrootd config file has been fixed and now sulky02 uses both file systems.
