Documentation

Heather Kelly and Chuck Patterson

Take a peek at the ISOC page: http://glast-isoc.slac.stanford.edu/
In particular "LAT Operations" --> "Training Aids"

Taking a look at the Workbook

Data Access nav bar needs updating

Advanced nav bar may need some reworking

If/when we move to SCons, there will be substantial updates required in the workbook to remove CMT, especially in the red nav bar. This update will require image updates, reworking of examples, etc.

Introduction of Mac as another O/S will also require some updates. Who would be the subject matter expert to introduce the use of Mac?   And when do we expect this to happen? (After SCons)

 Chuck estimates 8 - 10 weeks of work to remove CMT and introduce Mac. This may require freezing the workbook for some period of time.

Doc JIRAs

Jim asked how he should handle documentation requests and questions. It was suggested that he utilize the existing JIRA STDOC https://jira.slac.stanford.edu/browse/STDOC
