

JungFrau Pedestal

Pedestal = detector background

1. We should ALWAYS have the **stopper IN** for taking pedestals because everything else will be penetrated more or less by the high photon energy FEL
2. > takepeds
3. > makepeds -u unixID -r runNumber -F (-q queueID)
 - -q can be omitted if not sure

Note: every time we retake and remake the pedestal, we need to shut down and reconfigure the DAQ to pick up the changes
