 - Run bin/ana-rel-admin on s3df
 - login as myself
 - login as psreldev
 - conda activate and run ana-rel-admin
 - conda1-v3
 - Conda build
 - Clone psana1-feedstock
 - Installing conda-build in the conda base
 - Set environment
 - Run conda build
 - Deprecated
 - pdsdata and psalg migrated from svn to github
 - create conda_build_svn environment
 - conda activate and run ana-rel-admin
 - Remove tag from local git and github
- List of commands to build psana1 release on s3df
 - Login and set environment
 - Generate .tar.gz file with source code
 - Build release
 - Debugging
 - Upload .tar.gz file with release to anaconda lcls-i channel
 - Create new environment
- Create the same release on pcds
 - Update release for Jupyter Notebook
- References

psana1

Assemble all packages source code in tar.gz file

```
pslogin  
ssh psbuild-rhel7-01 -l psreldev
```

Set environment:

```
source /cds/sw/ds/ana/conda1/inst/etc/profile.d/conda.sh  
conda activate conda_build
```

```
cd /cds/sw/ds/ana/conda1/manage
```

look at subdirectory scratch/ to see what is the latest release, e.g. psana-conda-4.0.55, then create next:

```
bin/ana-rel-admin --force --cmd psana-conda-src --name 4.0.56 --basedir `pwd` --tagsfile psana-conda-svn-pkgs[-test]
```

Algorithm of ana-rel-admin

Command bin/ana-rel-admin ... assembles all the source code from github and svn archives with the latest tags into a .tar.gz file

--basedir `pwd` is converted to /cds/sw/ds/ana/conda1/manage/

input: < config/psana-conda-svn-pkgs # contains the list of packages with source code

output:

```
> scratch/psana-conda-4.0.56/<packages> # clones of all packages from git or svn
```

```
> git clone git@github.com:ilcs-psana/data_test.git /tmp/data_test
> scratch/psana-conda-4.0.56/psana-conda-tag # tags extended with version like 'tag': 'V02-00-76'
> scratch/psana-conda-4.0.56/psana-conda-4.0.56.sit_release # contains psana-conda-4.0.56
> downloads/anarel/psana-conda-4.0.56.tar.gz # archived content of scratch/psana-conda-4.0.56

> dumps at the end sha256sum .../psana-conda-4.0.56.tar.gz > 443440bf7a7fd7bcd89314b68c07f97f5a89dff38d6da98685e74f0671fac37d
```

Command bin/ana-rel-admin creates file accessible through url:
`file:///cds/sw/ds/ana/conda1/manage/downloads/anarel/psana-conda-4.0.56.tar.gz`
sha256sum /cds/sw/ds/ana/conda1/manage/downloads/anarel/psana-conda-4.0.56.tar

> 443440bf7a7fdbcdf89314b68c07f97f5a89dff38d6da98685e74f0671fac37d

Conda build

```
ssh pslogin (not as psreldev yet...)
ssh psbuild-rhel7-01 -l psreldev
cd git/psana1-feedstock/
Update in ~psreldev/git/psanal-feedstock/recipe/meta.yaml fields for set version and sha256:
```

edit psana1-feedstock/recipe/meta.yaml

```
{% set version = '4.0.56' %}  
...  
sha256: 443440bf7a7fdbcdf89314b68c07f97f5a89dff38d6da98685e74f0671fac37d  
...
```

Set environment:

```
source /cds/sw/ds/ana/conda1/inst/etc/profile.d/conda.sh      # OR conda deactivate after previous conda_build  
    conda activate conda_build_py3
```

Execute command:

```
conda build -c lcls-i -c conda-forge recipe  
> /cds/home/p/psreldev/conda-bld/linux-64/psana-4.0.56-pv39hb869b97_1.tar.bz2
```

conda build - the tail of output

```

{-c|--config      } path    configuration file, by default use psana.cfg if it exists (default: "")
{-e|--experiment } string  experiment name, format: XPP:xpp12311 or xpp12311, by default guess it from data
(default: "")
{-j|--job-name   } string  job name, default is to generate from input file names (default: "")
{-m|--module     } name    module name, more than one possible
{-n|--num-events } number  maximum number of events to process, 0 means all (default: 0)
{-s|--skip-events} number  number of events to skip (default: 0)
{-p|--num-cpu    } number  number greater than 0 enables multi-processing (default: 0)
{-o|--option     } string  configuration options, format: module.option[=value]

Positional parameters:
dataset - input dataset specification (list of file names or exp=cxi12345:run=123:...)

+ exit 0

Resource usage statistics from testing psana:
Process count: 1
CPU time: Sys=0:00:00.1, User=-
Memory: 1.4M

For Linux 64, Open MPI is built with CUDA awareness but this support is disabled by default.
```

To enable it, please set the environment variable `OMPI_MCA_opal_cuda_support=true` before

launching your MPI processes. Equivalently, you can set the MCA parameter in the command line:

```
mpiexec --mca opal_cuda_support 1  
...
```

In addition, the UCX support is also built but disabled by default.

To enable it, first install UCX (`conda install -c conda-forge ucx`). Then, set the environment

```
variables OMPI_MCA_pml="ucx" OMPI_MCA_osc="ucx" before launching your MPI processes.
```

Equivalently, you can set the MCA parameters in the command line:

```
mpiexec --mca pml ucx --mca osc ucx  
...
```

Note that you might also need to set `UCX_MEMTYPE_CACHE=n` for CUDA awareness via UCX.

Please consult UCX's documentation for detail.

```
done  
  
#  
  
# To activate this environment,  
use  
  
#  
  
#      $ conda activate ana-4.0.57-  
py3  
  
#  
  
# To deactivate an active environment,  
use  
  
#  
  
#      $ conda  
deactivate
```

```
(conda_build2) [psreldev@sdfiana001 psana1-feedstock]$
```

```
conda deactivate  
conda activate psana-conda-4.0.57  
conda install -c lcls-i -c conda-forge psana=4.0.57 # Chris? --experimental-solver=libmamba
```

have to do this on both old-psana and new-s3df as psreldev

Extra operations

See details in `~/.bash_history` or `~/.k5login`

```
cd /cds/sw/ds/ana/conda1/
```

```
if ./manage is not available

```

```
~psreldev/git/psana1-feedstock/recipe/meta.yaml
```

```
cd git
```

```
rm -rf psana1-feedstock/
```

```
git clone https://github.com/slac-lcls/psana1-feedstock
```

Set environment (chris):

```
source /cds/sw/ds/ana/conda2/manage/bin/psconda.sh. # Chris: conda2 because it needs py3, but conda1 also works with py3...  
conda deactivate  
conda activate conda_build
```

OR:

```
source /cds/sw/ds/ana/conda2/manage/bin/psconda.sh
```

```
conda create -n conda_build_py3 python conda-build anaconda-client
```

```
conda activate conda_build_py3
```

```
ssh psbuild-rhel7-01 -l psreldev
```

```
cd git
```

```
rm -rf psana1-feedstock/
```

```
git clone https://github.com/slac-lcls/psana1-feedstock
```

```
cp /cds/sw/ds/ana/conda1/manage/downloads/anarel/psana-conda-4.0.56.tar.gz /reg/g/psdm/web/swdoc/tutorials/
```

- copy here because **psreldev does not have permission !!!!???**
- because later it is used in `psana1-feedstock/recipe/meta.yaml` as url: <https://pswww.slac.stanford.edu/swdoc/tutorials/{{ name }}-conda-{{ version }}.tar.gz>

Issue: PermissionError: [Errno 13] Permission denied: '/cds/sw/ds/ana/conda2/inst/envs/conda_build/pkgs/libselinux-cos6-x86_64-2.0.94-h9b0a68f_1105'

```
Chris: cp ~cpo/.condarc ~/. # if ~/.condarc is not available
```

```
Valerio: conda create -n local_conda_build python conda-build conda-validate anaconda-client
```

scons test-Detector

- git repository data_test_access cloned with all other psana packages
- location for data_test can be controlled in config/psana-conda-svn-pkgs:
 - subdir=/tmp - clones this package as /tmp/data_test
- data_test_access is included but data_test is ignored in tar cfvz /cds/sw/ds/ana/conda1/manage/downloads/anarel/psana-conda-4.0.56.tar.gz psana-conda-4.0.56

Build on s3df

Initialization for build on s3df

IT IS ALREADY DONE ONCE

clone anarel-manage

```
cd .../con-build OR cd /sdf/group/lcls/ds/ana/sw/conda1/  
./sdf/group/lcls/ds/ana/sw/conda1/manage/bin/psconda.sh
```

```
git clone git@github.com:slaclab/anarel-manage.git
```

make github seen from psana nodes

```
ema ~/.gitconfig
```

```
\[http\] - remove
```

Run bin/ana-rel-admin on s3df

login as myself

```
> s3dfnx ends up as dubrovin@sdflogin002  
> psana ... because /afs/slac/g/pcds/svn/pdsdata is seen from psana nodes only... (Wilko)  
cd <path-to>/anarel-manage
```

login as psreldev

```
> s3dfnx ends up as dubrovin@sdflogin002  
ssh psana -l psreldev  
cd /sdf/group/lcls/ds/ana/sw/conda1/manage
```

conda activate and run ana-rel-admin

```
source /sdf/group/lcls/ds/ana/sw/conda1/manage/bin/psconda.sh  
conda deactivate  
conda activate conda_build  
bin/ana-rel-admin --force --cmd psana-conda-src --name 4.0.56 --basedir `pwd`  
Command bin/ana-rel-admin creates file  
/sdf/group/lcls/ds/ana/sw/conda1/manage/downloads/anarel/psana-conda-4.0.56.tar.gz  
accessible in ~psreldev/git/psana1-feedstock/recipe/meta.yaml through url:  
file:///sdf/group/lcls/ds/ana/sw/conda1/manage/downloads/anarel/psana-conda-4.0.56.tar.gz
```

conda1-v3

Valerio generated new conda1-v3

```
source /sdf/group/lcls/ds/ana/sw/conda1-v3/manage/bin/psconda.sh  
conda deactivate  
conda activate conda_build
```

```
(conda_build2) [psreldev@sdfiana002 manage]$ conda --version  
conda 23.10.0
```

```
source /sdf/group/lcls/ds/ana/sw/conda1-v3/manage/bin/psconda.sh
```

content changes for conda1-v3

```
- eval "$(./sdf/group/lcls/ds/ana/sw/conda1/inst/bin/conda shell.bash hook)"  
+ eval "$(./sdf/group/lcls/ds/ana/sw/conda1-v3/inst/bin/conda shell.bash hook)"
```

...

```
- eval "$(./cds/sw/ds/ana/conda1-v2/inst/bin/conda shell.bash hook)"  
+ eval "$(./cds/sw/ds/ana/conda1-v3/inst/bin/conda shell.bash hook)"
```

```
~psreldev/git/psanal-feedstock/recipe/meta.yaml
```

accessible in ~psreldev/git/psana1-feedstock/recipe/meta.yaml (ADD -v3 !!!):

<file:///sdf/group/lcls/ds/ana/sw/conda1-v3/manage/downloads/anarel/psana-conda-4.0.56.tar.gz>

Conda build

Everything works on s3df psana node under login psreldev because it needs some disk space... Other than that it can be built under any. other user.

Clone psana1-feedstock

IT IS ALREADY DONE ONCE for psreldev

```
> s3dflogin  
ssh psana -l psreldev  
cd git  
rm -rf psana1-feedstock/  
git clone https://github.com/slac-lcls/psana1-feedstock
```

Installing conda-build in the conda base

```
source /sdf/group/lcls/ds/ana/sw/conda1/manage/bin/psconda.sh  
conda deactivate # > base  
conda activate base  
conda install conda-build  
conda install conda-verify # also works in the base
```

Set environment

```
source /sdf/group/lcls/ds/ana/sw/conda1/manage/bin/psconda.sh  
conda deactivate  
conda activate conda_build
```

Run conda build

```
cd ~/git/psana1-feedstock/  
Update in ~psreldev/git/psanal-feedstock/recipe/meta.yaml fields for set version and sha256  
conda build -c lcls-i -c conda-forge recipe
```

Deprecated

pdsdata and psalg migrated from svn to github

```
svn co file:///afs/slac/g/pcds/svn/pdsdata/tags/V09-04-00 extpkgs/pdsdata
svn co file:///afs/slac/g/pcds/svn/psalg/tags/V01-00-12 extpkgs/psalg
```

created repositories on <git@github.com:lcls-psana/>

```
git clone git@github.com:lcls-psana/pdsdata.git
git clone git@github.com:lcls-psana/psalg.git
```

create conda_build_svn environment

```
s3dfnx - nx - server on s3df connects to dubrovin@sdflogin002
```

```

```
conda deactivate
```

```
conda activate conda_build_svn
```

Remove tag from local git and github

```
git tag -d V10-00-01 # removes tag on local git
```

```
git push --delete origin V10-00-01 # removes tag on github
```

List of commands to build psana1 release on s3df

Login and set environment

```
> s3dflogin
```

```
ssh psana -l psreldev
```

```
source /sdf/group/lcls/ds/ana/sw/conda1-v3/manage/bin/psconda.sh # conda1-v3 is a latest version of conda 23.10.0
conda deactivate
conda activate conda_build
```

Generate .tar.gz file with source code

```
cd /sdf/group/lcls/ds/ana/sw/conda1-v3/manage/ # if needed git clone git@github.com:slaclab/anarel-manage.git manage
bin/ana-rel-admin --force --cmd psana-conda-src --name 4.0.58 --basedir `pwd`
```

Build release

```
cd ~psreldev/git/psana1-feedstock/ # if needed git clone git@github.com:slac-lcls/psana1-feedstock.git
```

Update in recipe/meta.yaml fields for set version and sha256

```
conda build -c lcls-i -c conda-forge recipe
```

Debugging

In case of problem with tests look at log file like

```
/sdf/group/lcls/ds/ana/sw/conda1/inst/envs/conda_build2/conda-bld/psana_<13-digit-build number>/test_tmp/work/<log-file-name>
```

Upload .tar.gz file with release to anaconda lcls-i channel

```
anaconda upload -u lcls-i /sdf/group/lcls/ds/ana/sw/conda1/inst/envs/conda_build2/conda-bld/linux-64/psana-4.0.57-py39hed0727e_1.tar.bz2
```

response on anaconda upload

```
(conda_build2) [psreldev@sdfiana001 psanal-feedstock]$ pwd
/sdf/home/p/psreldev/git/psanal-feedstock

For Linux 64, Open MPI is built with CUDA awareness but this support is disabled by default.
To enable it, please set the environment variable OMPI_MCA_opal_cuda_support=true before
launching your MPI processes. Equivalently, you can set the MCA parameter in the command line:
mpiexec --mca opal_cuda_support 1 ...

In addition, the UCX support is also built but disabled by default.
To enable it, first install UCX (conda install -c conda-forge ucx). Then, set the environment
variables OMPI_MCA_pml="ucx" OMPI_MCA_osc="ucx" before launching your MPI processes.
Equivalently, you can set the MCA parameters in the command line:
mpiexec --mca pml ucx --mca osc ucx ...
Note that you might also need to set UCX_MEMTYPE_CACHE=n for CUDA awareness via UCX.
Please consult UCX's documentation for detail.

done
#
# To activate this environment, use
#
#     $ conda activate ana-4.0.58-py3
#
# To deactivate an active environment, use
#
#     $ conda deactivate

(base) [psreldev@sdfiana002 psanal-feedstock]$
```

```
conda deactivate
conda activate ana-4.0.58-py3
conda install -c lcls-i -c conda-forge psana=4.0.58
```

response on conda install

```
(ana-4.0.58-py3) [psreldev@sdfiana002 psanal-feedstock]$ conda install -c lcls-i -c conda-forge psana=4.0.58

## Package Plan ##

environment location: /sdf/group/lcls/ds/ana/sw/condal/inst/envs/ana-4.0.58-py3

added / updated specs:
- psana=4.0.58

The following packages will be downloaded:

  package          |      build
  -----|-----
  psana-4.0.58    | py39hed0727e_1      15.4 MB  lcls-i
  -----|-----
                           Total:      15.4 MB

The following packages will be UPDATED:

  psana           4.0.57-py39hed0727e_1 --> 4.0.58-py39hed0727e_1

Proceed ([y]/n)? y

(ana-4.0.58-py3) [psreldev@sdfiana002 psanal-feedstock]$
```

Create the same release on pcards

Info from Valerio

```
activate ana-4.0.58-py3 on S3DF,
>s3dflogin
ssh psana -l psreldev
source /sdf/group/lcls/ds/ana/sw/condal/manage/bin/psconda.sh
conda deactivate
conda env list
conda activate ana-4.0.58-py3
then:
```

```

conda list --explicit > ana-4.0.58-py3.txt

copy ana-4.0.58-py3.txt to psreldev on PCDS - do this trick due to permissions:

>s3dflogin
cp ~psreldev/ana-4.0.61-py3.txt .

> pslogin
ssh psbuild-rhel7-01 -l psreldev
scp dubrovin@s3dflogin.slac.stanford.edu:ana-4.0.61-py3.txt . # complete copy of ana-4.0.61-py3.txt

source /cds/sw/ds/ana/conda1/manage/bin/psconda.sh

conda create -n ana-4.0.58-py3 --file ana-4.0.58-py3.txt

```

response on conda create

```

(ana-4.0.54-py3) [psreldev@psbuild-rhel7-01 ~]$ conda create -n ana-4.0.58-py3 --file ana-4.0.58-py3.txt
