## I can't compile Java programs inside JAS - what's wrong?

If you are using Java 5 (aka Java 1.5) then the compiler built into JAS will not work. Instead you must use an external Java compiler. To fix this:

- 1. Start JAS
- 2. Choose View, Preferences
- 3. In the preferences tree select Java/Compiler
- On the Java Compiler Preferences page click the Browse... button next to the compiler option. Use the file browser to locate javac.exe. Normally this would be somewhere like c:\Program Files\Java\jdk1.5.0\bin\javac.exe

P	Preferences X		
	⊷AIDA ←General     ←HepRep ─Java Classpath Conpiler Navigation Tree Plugin Manager     Save/Restore     SimpleEditor     Spreadsheet     TupleExplorer     Web Browser	Preferences: Java Compiler Use built-in compiler External Compiler Compiler Compiler Ci\Java\jdk1.5.0_04\bin\javac.exe Browse Clear console before compilation Redirect output to: Directory Save file before compiling	
Ok Apply Cancel			

After this the compiler should work.
