

Xrootd Archiving to HPSS

Archiving L1 files

Level1 files (/glast/Data/Flight/Level1) are migrated to HPSS using an explicit list that is created from the Data-Catalog. There are three different list that contain different components. Currently the list:

```
level1backup-fullfiles.txt
```

is used. Recon (ending with _recon.root) files are not archived and have to be removed from the list.

Warning

recon files are not archived
