

Science Tools Update, August 18, 2009

Science Tools Working Group

The current release of the Science Tools remains **v9r15p4**.

Eric W. reports that "The FSSC now has 100% passage of its thread tests for the science tools on all 8 officially supported platforms, using a distribution based on Science Tools v9r15p2. So as far as the science tools are concerned, the FSSC is in great shape for the public release - we're at the stage of tweaking documentation and tests."

Data products: Studies in C&A on Pass 7.1 are continuing.

Source Catalog

The 11-month source list was the topic last week, along with a discussion of calculating flux uncertainties, and aspects of a new 1-year simulation for studying the performance of the catalog analysis.
