

SCons Status November 4, 2009

Documenting Navid's Head

<https://confluence.slac.stanford.edu/display/SAS/CMT+Release+Manager>

Schedule

<http://spreadsheets.google.com/ccc?key=0AradgsCW6fMzdDhiUklXdW84bkI3Wk5DX2JwWU9uTVE&hl=en>

Navid is in the same spot as last week and has started to look at zip/unzip in RMViewer

Windows

Concerning building dependencies on Windows, Joanne has seen similar comments in the SCons bug reports. It seems the LIB var does not have enough information to deal with this (and other things). Joanne will chat with Navid.

Joanne asked if Heather had a chance to test out st_graph on Windows and Heather admitted she did not. Since the meeting, Joanne went off and tried st_graph with the rebuild of APE 2.5.3 on windows, and making st_graph a static, and things worked. Was wondering if st_graph was the same package that we had previously requested James Peachey modify to make into a shared lib when we were having troubles with APE.

Need to schedule a meeting with Tracy and Leon.

Gaudi v21r4 is coming along. A default build using VC71 worked. Now Heather is working through eliminating some dependencies to avoid having to rebuild those Gaudi-externals in VC90.

ASP

Joanne has committed everything and is implementing some suggestions from Jim and wondering if she should go forward and tag them. Joanne was also wondering about creating a ASP-scons in CVS and will talk to Navid about that.
