

# Access Confluence pages using WebDAV

**Use Confluence like a network drive with drag and drop file operations.**

New instructions with Confluence 3.2:

To map a Confluence WebDAV client web folder in Windows XP use 'My Network Places' not 'My Computer'.

WebDav client setup instructions can be found [here](#).

Use network address: <http://confluence.slac.stanford.edu/plugins/servlet/confluence/default>

Known issue with Windows XP and 'My Computer':

Atlassian has an open improvement [ticket](#) to address the issue with Windows connecting to WebDAV

Until resolved they have recommended BitKinex WebDAV client as a work around. It is available for free [here](#).
