About Me

I graduated in 2009 with a BS in Applied Physics from the University of Utah. While and undergrad, I worked at the Telescope Array project, a joint collaboration mainly between the University of Utah and the University of Tokyo, designed to be merging of HiRes and AGASA.

While there, I worked on cluster computing setups, deployable muon detector designs for the Telescope Array Low Energy extension (which will focus on cosmic rays between 3×10^{16} and 10^{19} eV), and more recently on bi-static radar techniques of observing cosmic rays.
