

TULIP database through a GUI

Tulip Database through a GUI based Client

Tulip database at pinger.slac.stanford.edu can be accessed through any MySQL client from Building 050 3rd floor at SLAC. The recommended client is MySQL Workbench, which can be downloaded from <http://dev.mysql.com/downloads/workbench/5.2.html>.

The read only version is available via user `scs_tulip_uro`, host `mysql-node01`, port `3307`. The password is available via `cat /afs/slac/package/pinger/tulip/dbPwd/pws-tulipro`. I am not sure about the read/write the notes which do not work, say:

you need to be on the slac internal network to be able to access this. User that has access to it is Tulip through port 1000 (it does not work with the VPN I believe the port is blocked).

Apart from exporting reports in diverse formats you can also do a quick row select, the output of which will show up in the Results tab. You can also manipulate the table as well by using the Alter, Create, and Drop commands. Table data can be directly manipulated using the Edit Table Data command; this lets you edit the contents of columns and rows in the table, just as if you were editing a spreadsheet.

The screenshot shows the MySQL Workbench interface. The SQL Editor (d) tab is active, displaying the query: `SELECT * FROM `tulip`.`landmarks`;`. The Object Browser on the left shows the database structure, including the `landmarks` table. The Results tab is active, showing a table with 538 records. The table has columns: `nodeID`, `name`, `hostName`, `ipv4Addr`, `domain`, `description`, `pingerNickname`, `pingerMonitor`, `pingerBeacon`, and `notCheck`. The first few rows of data are visible, showing various university and research institution entries.

Sql query box could be used to get custom results

Example insert query

```
insert into `tulip`.`landmarks` values ('0', 'pinger.narss.sci.eg', 'pinger.narss.sci.eg', '195.43.3.135', NULL, NULL, NULL, NULL, NULL, NULL, '0', NULL, 'Cairo', NULL, 'Egypt', 'Africa', '30.1191', '31.3103', 'Pinger', NULL, 'http://pinger.narss.sci.eg/cgi-bin/traceroute.pl?function=ping', 'http://pinger.narss.sci.eg/cgi-bin/traceroute.pl?', NULL, NULL, '1', '0000-00-00 00:00:00', '');
```

* Make sure safe mode is off
